I had ask Gary for this a few weeks ago. I think it generally supports your presentation....but didn't look at the details.

Richard M. Fetzer

Gary,

Per your request, I charted the following parameters against pH, ORP and DO to see if there appears to be some kind of a trend:

Methane
Arsenic
Iron, and
Manganese.

For each of the above listed parameters, you will see a separate worksheet within the attached excel spreadsheet. For starters, I have generated 3 scatter charts for each parameter/analyte. This approach allows us to first visually examine the behavior and look for pattern(s).

So far, I have made the following general observations:

Ex. 5 - Deliberative

Please feel free to call or email me if you have questions or if you need to discuss further.

Thank you for the opportunity to assist you.

Regards.
